

Eternally Your Card

Here's the process of how to make a light up card.

Step 1: Tools

Here's are the tools I had used

- 2 Black Paper
- 2 LED Lights
- White Paper
- Exacto Knife
- Tissue Paper
- Cooper Tape

Step 2: Start the Card

First, I fold the first black paper into half like a booklet.

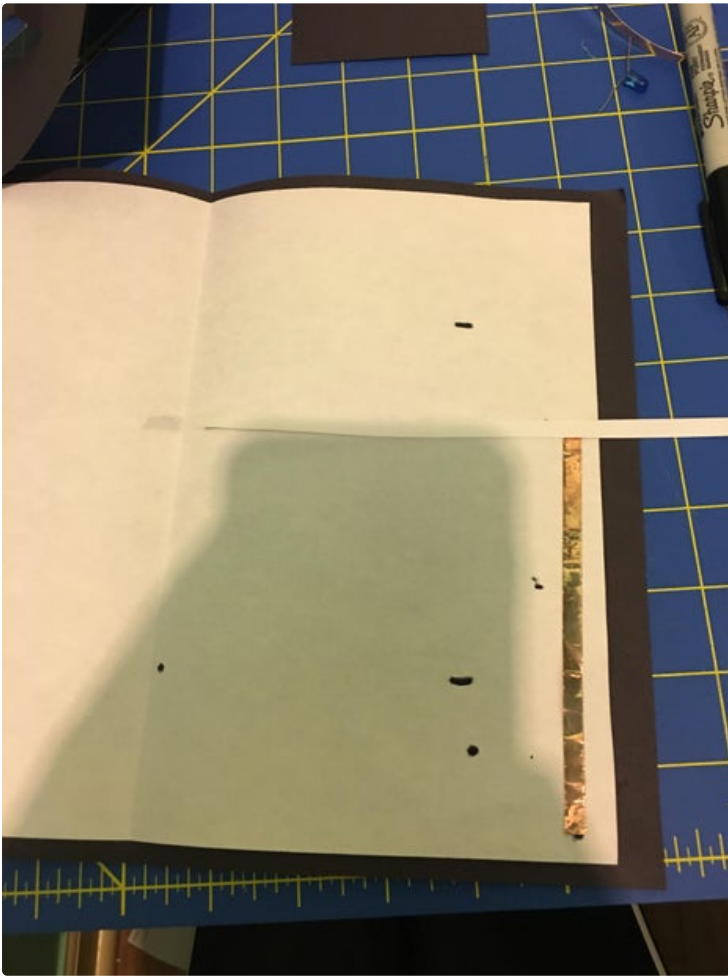

Step 3: Next: Cut

I cut out two small lines each sides with the exacto knife for the little pop up window.

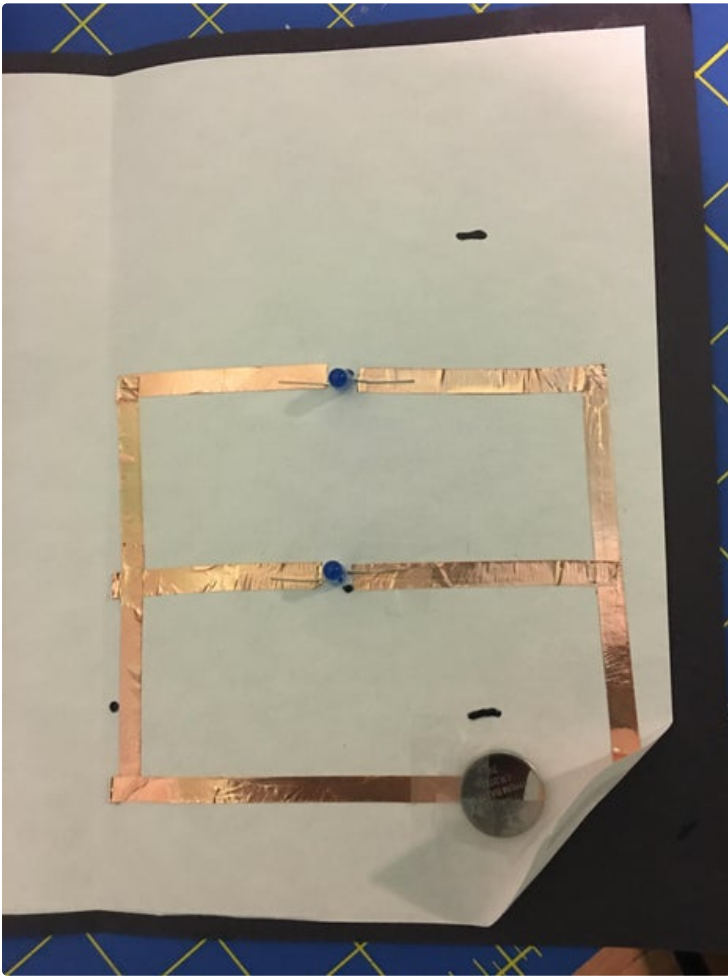

Step 4: Pop Up Window

I got my pop up window. I cut a small piece of the tissue paper and glue it to the inside the small window.

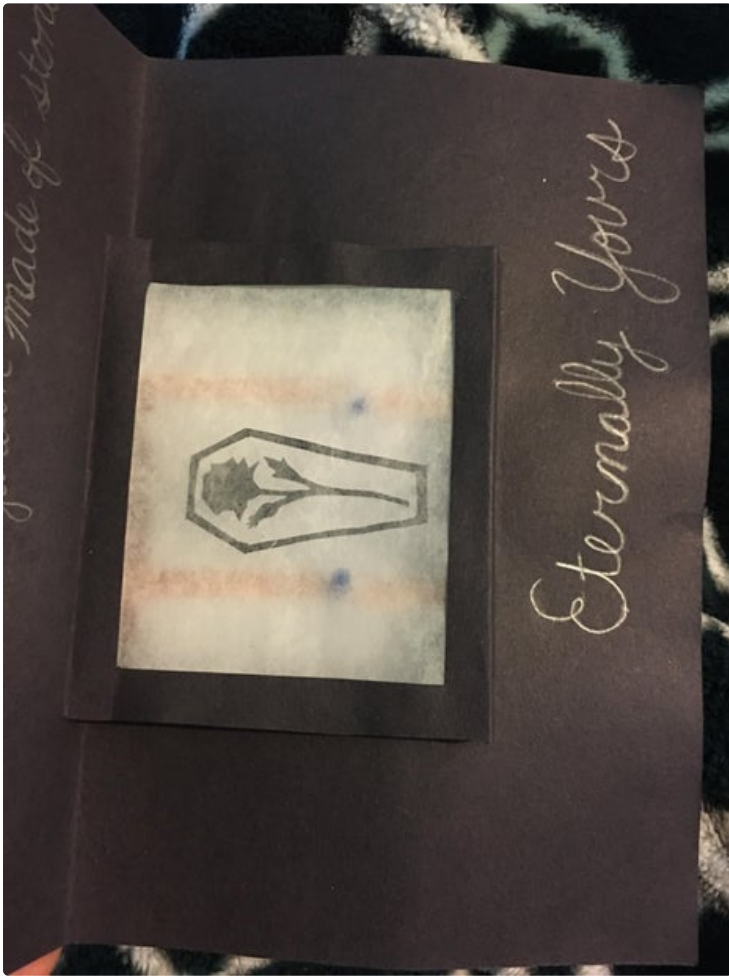

Step 5: Make the Circuit

I have made point for to make a parallel paper circuit. I start using cooper tape to connect the dots.

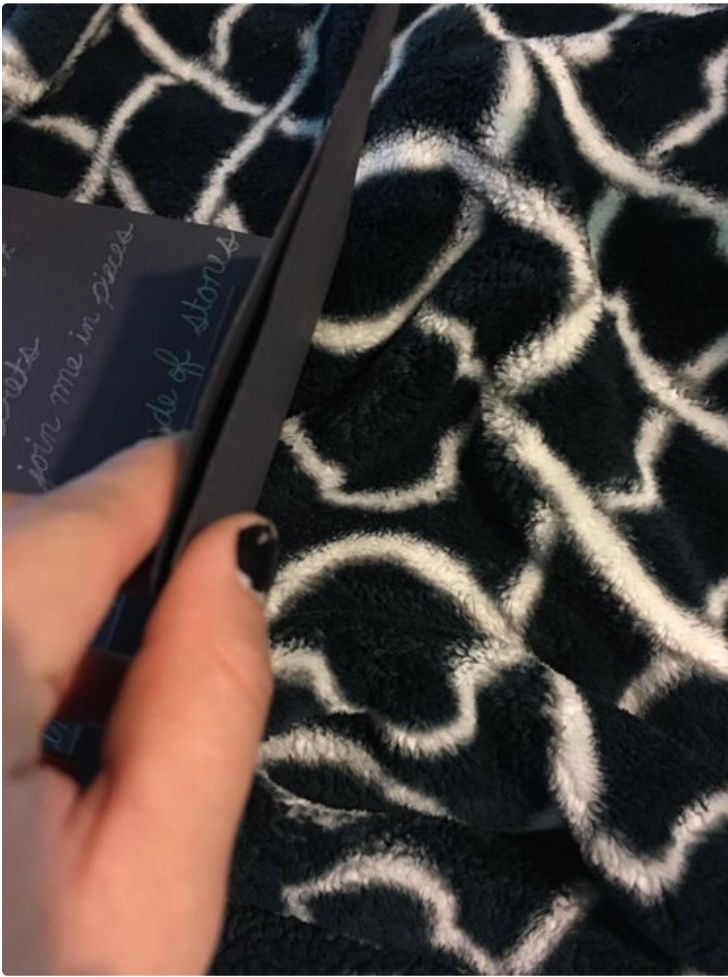

Step 6: Then...

I had taped the LED light onto the copper tape and the battery. I have made a tiny fold paper of the white paper as a switch.

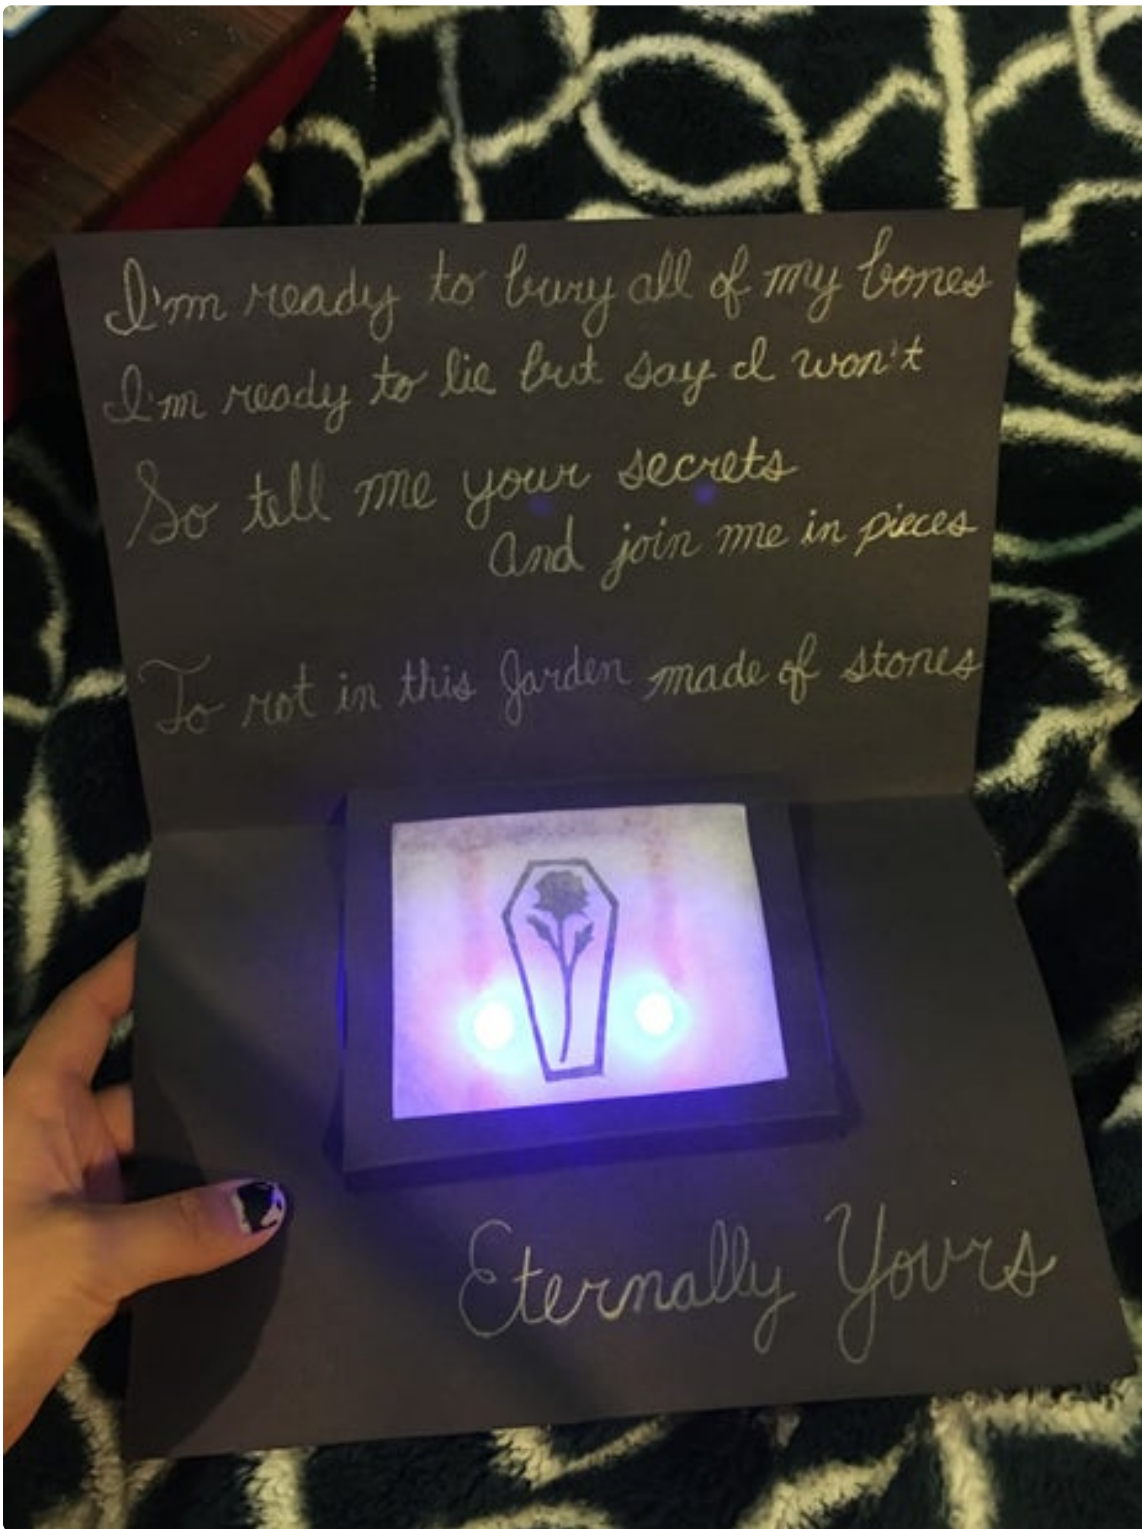

Step 7: After...

I had placed the black paper over to cover the white paper, with the circuit inside. I also made a tiny cut piece and wrote on the card.

Step 8: How to Keep Them Together?

I had to glue two black papers, which I had turned both into a booklet. Connect the two booklets and make sure the white paper with the circuit is inside of the booklet.

Step 9: Finally...

I wrote more on the card with a silver color pencil. I tested to see if it light ups and it did light up.
